

Brett D. Moulding

As the Science Education Specialist and Curriculum Coordinator for the Utah State Office of Education, Brett Moulding has technically only been in public service for a decade, but as a high school science teacher he was actually already a highly regarded public servant for twenty years before assuming his current duties. Brett became interested and active in developing curricula and instructional activities focused on creating an understanding of scientific concepts through hands-on methods. His leadership abilities subsequently lead to Coordinator and Director positions in local, state and national committees including election, this year, as the President of the Council of State Science Supervisors.

Brett is recognized by his peers as a consensus builder as well as a leader, and he spearheaded the rewriting of the entire state science core curriculum, which officials of the U.S. Department of Education have recognized as exemplary. His awards and recognitions are numerous, but his nominator's opinion makes for an eloquent summary: "Brett has accomplished more for the improvement of science education and scientific literacy in the State of Utah than any other single individual."
